

Project Design Phase-I
Proposed Solution

Date	2 November 2022
Team ID	PNT2022TMID02482
Project Name	Project – University Admit Eligibility Predictor

Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Students seek assistance from various educational consultancies to help them secure admission in the universities based on their profile because they are largely unaware of the procedures, requirements, and specifics of the institutions they wish to attend. In exchange, the students are expected to pay a significant amount as a consultancy fee.
2.	Idea / Solution description	On the basis of several factors, such as the student's academic performance, IELTS score, GRE score, and others, making an accurate prediction of their admittance to the university of their choice.
3.	Novelty / Uniqueness	It appears that there are no web tools that can forecast a student's eligibility requirements for admission to their ideal university and also offer customized insights on particular areas where they might improve.
4.	Social Impact / Customer Satisfaction	It assists students in selecting the appropriate universities. The direct linkage between students and universities completely eliminates or lowers the cost of consulting services.
5.	Business Model (Revenue Model)	There is tremendous pressure on universities to take more students and assure student success. When under strain, they can use forecasting models that can simplify the student admissions procedure. and increase effectiveness.
6.	Scalability of the Solution	The model might be improved to consider university-specific exams and to keep the most recent eligibility requirements in order to lessen the tremendous pressure that students endure to be admitted to a university.
