University Admit Eligibility Predictor

Team ID: PNT2022TMID02482

Problem Statement:

Today's students frequently pursue their education outside of their own nation. Many Indian universities piqued the interest of the foreign students. The majority of international students come from other countries. The number of foreign students attending Indian universities has grown quickly. As the number of international students studying in India rises, to be admitted to their ideal university, each applicant must compete fiercely. Typically, students don't have much knowledge of the protocols, demands, and specifics. Universities in India go to education consulting companies for assistance. They must pay tremendous amounts of money in consulting fees for this. There are only a few websites in addition to these education consultant companies.as well as blogs that instruct students on the application process. The resources that are now available have the main disadvantage of being extremely scarce and furthermore Considering their accuracy and reliability, they are not really reliable. This study aims to create a system employing machine learning methods. We'll call it the University Admit Eligibility Predictor (UAEP). The people will be assisted in determining the likelihood that a university will approve their application.

Additionally, it will assist them in choosing the universities that are most appropriate for their offer them with a profile of such universities as well as their specifics. Successful acceptance into the universities that are most appropriate for their profile. Students will be more benefited in this project and it will give the accurate results to the students.
